Pollution Prevention — It's Part of the Plan

Make sure your crews and subs do the job right!

Runoff from streets and other paved areas is a major source of pollution in San Francisco Bay. Construction activities can directly affect the health of the Bay unless contractors and crews plan ahead to keep dirt, debris, and other construction waste away from storm drains and local creeks. Following these guidelines will ensure your compliance with local ordinance requirements.

Vehicle and equipment maintenance & cleaning

- Inspect vehicles and equipment for leaks frequently. The risk of spillage leaks increases if equipment is used after rain.
- Fuel and other volatile materials should be stored away from sparks or flames.
- Keep a fire extinguisher on the job.

Dewatering operations

- Ensure water for dust control, irrigation, or other use is properly disposed of to avoid erosion of the soil.
- Do not dump water into storm drains.

Earthwork & contaminated soils

- Keep excavated soils on the site where it is least likely to collect in storm drains.
- Never use storm drains to transport structural materials.

Saw cutting

- Always complete saw cutting when necessary to avoid excessive dust.

Paving/asphalt work

- Do not remove materials during wet weather or when asbestos is present.

Painting

- Never leave paint brushes or materials in a gutter or ditch.

Concrete, grout, and mortar storage & waste disposal

- Be sure to store concrete, grout, and mortar under covers and away from storm drains. These materials must never reach a storm drain.

Storm drain polluters may be liable for fines of $10,000 or more per day!
1. An engineering permit will be required for any work in the public right-of-way, including but not limited to construction staging, construction parking, sidewalk drainage, or sewer work. The engineering permit can be issued after the building permit is approved and issued.
